PROPOSAL FOR COVID-19 TESTING SITE

My name is Momtchil Govedarov,

I am the founder and CEO of [SOSYES.ORG](https://www.sosyes.org), a non-profit organization, whose current mission is to stop the spread of the COVID-19 Pandemic in our communities and across California by offering a brand new and more effective saliva based test to the public.

Our mission is to test more people, stop the spread of the virus (and its new mutations as our labs are capable of getting up to date information) and to help in the development of more successful vaccines. We are dedicated to the cause of saving lives, re-opening local businesses and getting our community back to normal.

There are not enough sites for all of the people that need this service. With your help we can narrow this gap, and provide safe and free testing to all of those in need. Using your existing parking lot will allow us to solve this problem all together; creating a better environment for our families, friends, colleagues and co-workers.

We are currently adding more and more sites throughout the state daily, and believe that your location will be a great fit. Not only will you be helping prevent the spread of this devastating virus, but will also be showing the community at large that you are here for them as well. The gratitude of the local people and the publicity of your well doing will greatly benefit your standings and be remembered long after our goal is accomplished.

We only need a space for a 10' x 10' tent, and part of your parking lot to be used while people are safely tested in their vehicles. This is a contactless procedure, and all CDC safety protocols are met while testing. Our staff of technicians are HIPAA certified, and we have been authorized by the California Department of Health (CDPH) to operate throughout the state of California. Our program also follows all OSHA guidelines to prevent contamination, or transmission of the virus. Our highly trained technicians have completed Nurse Aide Training and wear full appropriate protective gear and equipment, following contact-less sample collection while patients remain in their vehicles. Traffic flow will be directed with appropriate signage and traffic cones to keep an orderly and efficient flow while on the premises. All of our sites are covered by our Laboratory and Doctor Liability Insurance, so your location will be protected at all times.

We would like to start a conversation with you to explain in more detail how we can work together in helping keep our communities and loved ones safe.

Sincerely,
Momtchil Govedarov
